AMPTRON BLUEDGE DISPLAY LCD 2.4 Inch Full Colour RS485 BMS Display

AT-BMSMON-2.4-COL-RS485-AV01

*We may modify these specifications without prior notice.

Thank you

Dear valued customer.

Thank you for choosing Amptron Products. We greatly appreciate your support. Our team works behind the scenes to create advanced battery systems, while providing top-notch Australian based service to our customers.

Support and feedback from our customers, along with the dedication of our staff, allows us to deliver exceptional products, competitive prices, and an overall excellent experience.

Thanks again for giving us your vote of confidence. We hope that you'll enjoy using our products as much as we've enjoyed creating them.

Please feel free to reach out to us anytime.

Sincerely,

Amptron

Product Registration

To ensure full coverage, visit our Amptron website at: https://amptron.au/product-registration and register your product within 60 days of purchase to activate the warranty.

Fill out the below information for your own record keeping:

General Description

This colour LCD screen is a display accessory for Amptron's BluEdge Battery series. Simply connect the display to a BluEdge battery (or a bank of batteries that supports parallel communication) with a compatible communication cable to get an instant visual overview of the key status of your battery system. The display comes with built-in audible warning alarm for critical errors.

Kev Features

- Quick, easy setup to display key battery information such as, State of Charge (% and Ah), Voltage, Current draw, Temperature, Cycles etc.
- Suitable for compliance with AS/NZS 3001.2.20222 and AS/NZS 3004.2:2014 standards.
- Built-in audible alarm that will trigger on adverse battery conditions prior to battery shut-down.
- · Conveniently view any battery alarm codes.
- Easy installation with common cables, for remote battery monitoring with flexible flush mounted design.
- View consolidated battery information for a bank/group of connected batteries in one display (for models that supports parallel communication), dive into detailed cell data for each connected battery in the group.

Dimensions (mm)

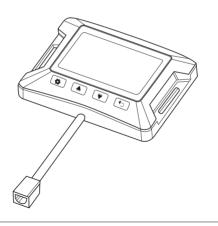

Mounting Instructions

There are two ways to mount the display. The monitor can be mounted directly to a wall, without a cavity behind it.

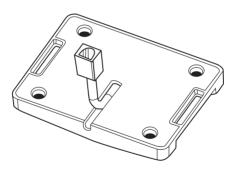

In this example, the wire can be routed to run through the bottom of the display, allowing a flush-mount to the surface.

Mounting Instructions Cont.

In the second example, the monitor is installed on a wall with a cavity behind it. In this case a hole can be drilled (30mm diameter) allowing the RS485 port to be pushed into the recess to allow hidden connection to the equipment.

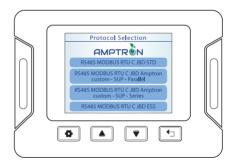

** Must be installed in a dry location.

Protocol Selection

The BluEdge monitor has different protocols available. The choice of protocol depends on your battery model and/or configuration (single battery, batteries connected in parallel or batteries connected in series).

When connecting the monitor, or turning on the battery, the following selection screen will be presented:

Protocol Selection Cont.

Use the ▲ and ▼ arrows to select the correct protocol and the ♣ icon to select the chosen protocol.

Please consult your battery user manual for the applicable protocol to select for your battery(s), or head to our website for the latest mapping of protocols to use for each battery model:

Screen Detailed Descriptions

RS485 MOBUS RTU-JBD STD (Protocol 1)

1	SOC (State Of Charge)	6	Battery Amperage (charge/discharge)
2	Remaining Capacity (Ah)	7	Battery Wattage
3	Status (standby/charge discharge)	8	Battery Status Normal/ Alarm (see alarm list)
4	Time To Empty (time until depletion)	9	Battery Average Temp (averaged across 3 sensors)
5	Battery Voltage		

1	Min/Max Cell Voltages	4	Min/Max Cell Temperature
2	MOSFET State	5	Battery State Normal/ Alarm
3	Total Cycle Count		

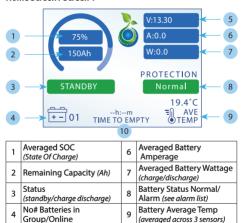

RS485 MOBUS RTU-JBD Custom-SUP-Parallel (Protocol 2) RS485 MOBUS RTU-JBD Custom-SUP-Series (Protocol 3)
